

How to Print Labels - Windows

Rose supports three Dymo label sizes:

- **30334 - 2-1/8" x 1-1/8" (Default)**
- **30332 - 1" x 1" (Small)**
- **30299 - 2-1/8" x 7/16" (Jewelry)**

Currently, we **only** guarantee label printing on Chrome browser.

1. Obtain the drivers for the Dymo 450 from dymo.com. ----> **Support** ----> **Downloads: Software, Drivers & User Guides** ----> **Click on the Windows Download**. Or click [here](#) to download directly.
2. After the download has finished, open it and run the install wizard.
3. Follow the Dymo install prompts.
4. After the Dymo installation is complete, you can then plug the printer into your computer. Doing so before the software is completely installed will require that you remove the printer from the Windows Devices and Printers screen, then add the printer back in by plugging it in.
5. Go to **Windows Settings** via the Windows panel icon in the bottom left corner of the screen.
6. Click on **Settings** ----> **Devices** ----> **Printers & Scanners**.
7. Click on the **Dymo Labelwriter 450/550** ----> **Manage** ----> **Printer Properties**
8. If you have more than one Labelwriter 450/550, rename the printers here (Front label printer or Back Room label printer, etc). Renaming them will help you select the correct one when using our Kloudprint server.
9. If you renamed the printer, go back one screen and click on **Printer Preferences**.
10. Click **Advanced** ----> **Paper size** ----> **select 30334 2-1/4in x 1-1/4in**.
11. Click **OK**.
12. The default paper (label) size will (30334) never change, regardless of the label size you print on within Rose.
13. If you want to print on a different label than the default label (30334), you will have to save the item in Rose on a small label or jewelry label.

* For Troubleshooting purposes, please use Chrome for your browser as we can guarantee compatibility with Chrome.

450 Twin Turbo users - to change which roll you want to print from:

1. Note: You cannot use Kloudprint (remote print and print all)
2. Click on the **printer icon** within Rose's print preview screen.
3. Then click on More Settings. Click on **print using systems dialogue**
4. Click on **Preferences**
5. At top top of the box click on the tab **Paper/Quality**.
6. Click on **Paper Source** and choose either the left or right roll.
7. This setting will be remembered. To be efficient, make sure to print all labels needed for that roll and then follow the same steps to change back to the other roll when you are ready to print on the second label roll again.
