Print all your labels at once

Rose Pro · Take-ins

Good to know: With Rose Pro, labels go straight to your label printer with no print window. Your label printer needs to be set up in PrintNode first (see **Set up PrintNode**).

1 Click **PRINT ALL LABELS**.

It's above the item list on the take-in. Every item on the take-in is included, so you don't need to tick any boxes.

2 Check the **LABEL TYPE**.

It should match the labels in your printer, for example DYMO 1 x 1. Choose **BY ITEM** to use each item's own label type.

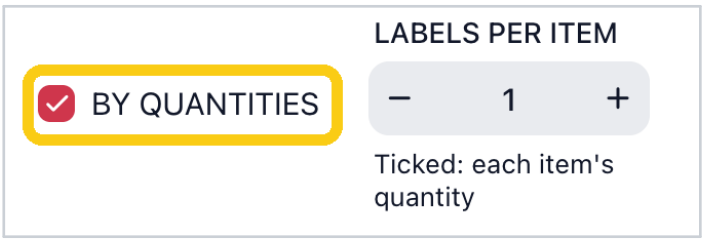

3 Pick your label printer in **PRINTER SELECTION**.

Make sure it says **ONLINE** underneath. Your store's usual printer may already be picked.

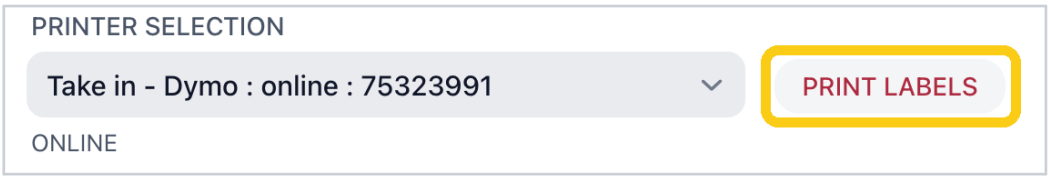

4 Leave **BY QUANTITIES** ticked.

You get one label for each piece: 10 bowls means 10 labels. To print a set number instead, untick it and use **LABELS PER ITEM**.

5 Click **PRINT LABELS**.

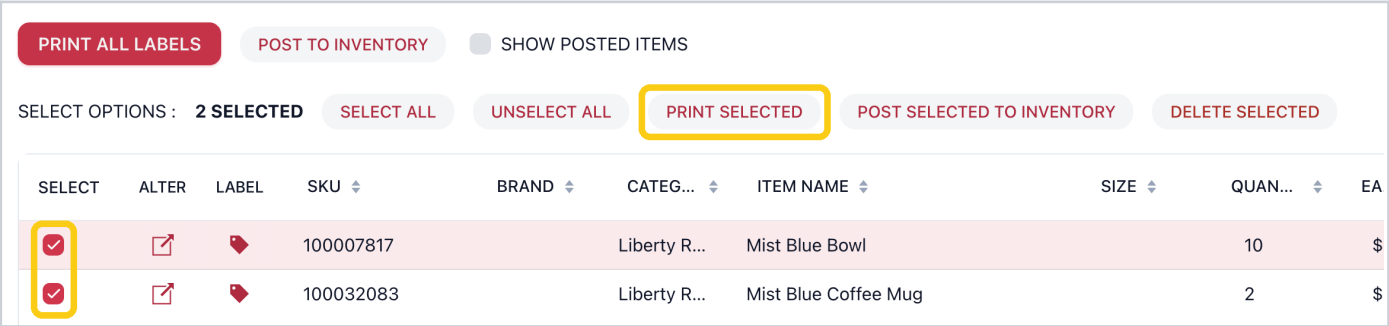

A green message in the bottom-left corner says **SENDING 2 LABELS TO PRINTER**, then **2 LABEL(S) SENT TO PRINTER** (with your number of labels). Your labels print at the label printer. There's no print window.

Only want some items?

Tick the box next to each item you want, then click **PRINT SELECTED**. The same window opens: do steps 2 to 5.

Printing just one label? Click the red tag next to the item instead. See **Print a label**.

Label looks wrong? See **My label printed wrong**. **Need more detail?** See **Printing labels: full guide**.
